The combinatorics of plane lattice polygons and mirror symmetry for orbifold surfaces

A. Corti

Department of Mathematics, Imperial College London, Room 673, Huxley Building, 180 Queen's Gate, London, United Kingdom
`[a.corti@imperial.ac.uk]`

I introduce mutations of lattice polygons, and discuss some results and conjectures on the classification of lattice polygons up to mutation. In the second part of the talk I relate these questions to the classification theory and Fano/LG correspondence for orbifold surfaces.
